Connect your first store

A store is the pairing of a domain, a currency and a tax profile.

1. Open **Settings → Stores** and choose *Add store*.
2. Enter the public domain, for example `shop.example.com`.
3. Pick the base currency. It cannot be changed once an order exists.
4. Choose a tax profile, or start from *EU standard rate* and edit it later.
5. Save, then use *Send test order* to confirm mail leaves the server.

A store stays hidden from visitors until you switch it to **Published**.
